EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Benjamin Urcia on April 18, 2002.

The application has been amended as follows:

In claim 4, change "claim 2" to --claim 3--.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: No prior art references on the record disclose a multi phase locked loop comprising a set of phase detection units where the delay signal of each successive unit is coupled to its previous unit in generating control signals for a charge pump, and the currents from the charge/discharge units of the charge pump are, after weighted, combined to be delivered to a loop filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Art Unit: 2634

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Buhler (5,408,200) and Yoshida et al (4, 109,102) each disclose a plurality of phase detectors and a charge pump but fail to teach a cascade connection of the detectors with delay signals between adjacent phase detectors. Frkad-Rad et al (5, 799,048) teaches latches, similar to phase detectors, coupled in series and a charge pump, but fails to show the application of delay signals from a phase detector to its previous one.
